RE: Site Inspection, David Penney, Lucin Varacite Mine, S/003/034, Box Elder County, Utah

Date of Inspection: May 18, 1999
Time of Inspection: 1630
Conditions: Warm and Clear
Participants: Doug Jensen and Lynn Kunzler, DOGM

Purpose of Inspection: Site Evaluation and Inspection

The Division inspected this site to evaluate any new disturbances that may have taken place since the last inspection.

The site was fenced completely, though the fence was in need of repair. There was evidence that rock hounds had been accessing the site to collect specimens. Areas of disturbance appear to be much the same as they were during the 1995 site inspection. Natural vegetation is evident on waste piles and appears to be maturing and filling in over time.

The excavation is deep enough (approx. 50') that, if no further work is planned in this area, the operator should be instructed to back-fill this area for public safety. In the interim, the fence should be kept in good repair and posted with warning signs to insure that no one enters the area without being aware of the hazards.
